DETAILED ACTION

1. In view of the appeal brief filed on 08/20/2002, PROSECUTION IS HEREBY REOPENED. A new ground of rejection is set forth below.

To avoid abandonment of the application, appellant must exercise one of the following two options:

(1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final); or,

(2) request reinstatement of the appeal.

If reinstatement of the appeal is requested, such request must be accompanied by a supplemental appeal brief, but no new amendments, affidavits (37 CFR 1.130, 1.131 or 1.132) or other evidence are permitted. See 37 CFR 1.193(b)(2).

Drawings

2. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the mouse in claim 3 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-4,7,9-14 is rejected under 35 U.S.C. 103(a) as being unpatentable over Willner et al., (U.S. Patent No. 6,288,709) in view of Russell (U.S. Patent no. 5,481,265).

As per claims 1,7,13,14 Willner shows a wireless computer (In Col.3 lines 34-38) input device for use with a data processing data processing system having a wireless transmitter for transmitting signals (In Col.7 lines 30-32 and element 200 in fig.5) and a selector (In col.14 lines 35-42) for selecting a one of plurality of wireless devices with which to operate, wherein a selector causes a signal to be transmitted from the wireless transmitter (in col.14 lines 25-420).

Willner does not show a plurality of data processing systems to operate with wireless controller. Russell shows a plurality of computer device being controlled by wireless controller (In Fig.14 and in col.17 lines 8-10) It would have been obvious to one of ordinary skill in the art, at the time of the invention was made to allow the teaching of Russell's plurality of data processing into the system of Willner's because it would have provided a interface system allowing signal transmission and reception without rigorous aiming of the input device and externally switchless.

Art Unit: 2673

As per claims 2,4,9,10,11 Willner show input device as a keyboard and infra-red transmitter (In col.8 lines 59-60 and In col.7 lines 30-38).

As per claims 3,12 Neither Willner nor Russell shows an input device is a mouse, it would have been obvious to one of ordinary skill in the art, that input device such as wireless keyboard and hand held device is well known in the art.

Allowable Subject Matter

5. Claims 5,6,8,15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reason for the indication of allowable subject matter:

The prior art fails to teach or suggest the wireless transmitter is a radio frequency transmitter and a selector allow a selection of one of a plurality of radio frequencies, wherein each of the plurality of radio frequencies corresponding to a separate one of the plurality of data processing systems as claimed in claims 5,6.

The prior art fails to teach or suggest the signal is a frequency recognized by the particular data processing system as claimed in claim 15.

Conclusion

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nitin Patel whose telephone number is 703-308-7024. The examiner can normally be reached on 8:00-5:00.

Art Unit: 2673

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Bipin H Shalwala can be reached on 703-305-4938. The fax phone numbers for the organization where this application or proceeding is assigned are 703-872-9314 for regular communications and 703-308-9052 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-305-9618.
